

Dear Esteemed Legislators,

Please put a hold on SB 637, Michigan's 5G "small wireless communications facilities deployment act". Safety tested is needed - independent of industry.

2G has been proven, in the US NTP study and in the Rammazini study recently released in Italy, to cause cancer in laboratory animals. How can we in good conscience transmit 5G millimeter waves (working in connection with 4G) near children's bedrooms and classrooms?

This is a ploy by telecom to increase their profits and their claims to close the digital divide are entirely false.

We are not only concerned about cancer. Many people worldwide are sensitive to wireless radiation - children are suffering migraines, nosebleeds and learning disabilities when exposed to wifi in schools. Many adults have become so ill they can no longer work and are forced to leave their homes.

California had a similar bill which Governor Brown vetoed. San Jose Mayor Sam Liccardo was on the FCC Broadband Commission and resigned because telecom was running the show and telecom had no true intent to make broadband equitable.

This bill is detrimental to the health and welfare of your citizens. It will also affect property values and aesthetics of your beautiful state. Please vote no on SB 637.

There are viable solutions such as municipalities owning wireline broadband, It uses fiber to the premises and is less expensive for the consumer and is also equitable and faster. Several cities in the US have done this and it is boosting their economies.

Thank you.

Respectfully submitted,

Ellen Marks
