

New studies are coming out that show direct links between 5G technology and health effects like cancer, the committee/bills have not addressed public safety other than in relationship to aging infrastructure, SB637 and the bills related to it have not made accommodations for those with related medical conditions.

This program will require a cell tower transmitter every two to ten homes without notification, and without any ability to refuse or stop installation of these transmitters. 5G uses ultra high-frequency wireless radiation between 24 GHz to 90 GHz, up from the 1 to 4 GHz we have now. The Army is using 95 GHz as a biological weapon called the Active Denial System. Wireless radiation has been proven to increase cancer, neurological effects, immune system disorders, and reproductive harm - this ultra intense form of wireless will pulse more and be more highly modulated, the factors our scientists believe will make it even more bio-active. Recently 180 doctors and scientist from 35 countries have formally appealed for a moratorium on the roll-out of 5G due to wireless radiation's known health effects.

As someone who is, and whose family is, suffering from ill health effects from the radiation and effects of harmonic distortion to the normal AC sine waves (caused by the "Advanced Metering System" transformer) which now permeate our house's electrical wiring - all thanks to the DTE Itron meter forced upon us - I urge you not to support further radiation contamination with the 5G system. For the sake of the health of your constituents, and the eventual class action law suits which will result from health problems resulting from further deployment of these systems, please reject SB637 and its related bills.

Thank you,

Kurt Snyder
