

Senators:

I am opposed to the Senate Bill 637 that you are presently considering in the Senate Energy and Technology Committee.

I urge you to thoroughly consider and study the health and safety implications of 5G technology before moving forward on this bill.

I object to the fact that the bill will exclude municipalities a voice in the 5G roll out and prevent municipalities from "opting out" of this potentially dangerous technology.

The jury is still out about the consequences of drenching Michigan with more microwaves in the atmosphere. Multiple studies show that these wavelengths are dangerous to wildlife (especially birds), bees (agriculture), and human beings (especially children and those who are electrosensitive). The Bioinitiative Report (bioinitiative.org) documents thousands of scientific studies that show that microwave technologies are not benign.

Please stop. Pause. Consider the consequences. Thoroughly understand the frightening implications that a statewide roll-out of 5G technology will cause.

Thank you,
Lori Ebaugh
Milford, MI
