

Dear Michigan Senators;

Please pause Bill SB 637 until safety testing can be done, independent of industry, and verbiage for medical accommodations are added.

SDSU BRAIN CANCER CLUSTER:

I lost my beautiful young son Rich from GBM brain cancer in 2008. Rich was a student on the SDSU (San Diego Campus). Dr. Vrijish Tantuwaya a neurosurgeon out of Poway, CA told our family that, "Rich's cell phone was the cause of his brain tumor." Rich's tumor was ipsilateral, meaning he was right handed and the tumor was located in the right frontal lobe...the same side. To be very clear, the cell phone and the exposure to the HPWREN cell tower on the SDSU (San Diego State University) campus, there was NO chance for survival.

Rich lived just shy of 7 months with this horrific disease and passed away in my arms, October 11, 2008. On August 7, 2009 I found articles on the internet about a 'Brain Cancer Cluster on the SDSU campus.' Rich was the graduate student, mentioned in these articles. 4 men in 2008 were diagnosed with brain cancer. These men all worked in one building, (Nasatir Hall) and one room, 131. I contacted the SDSU Administration and found this futile. I drove out to San Diego from CO and stayed a month, meeting professors off campus for meetings. All of them told me that Rich would spend long hours in Nasatir Hall, room 131. Rich was a TA for professor Nancy Speckmann.

I'm in the documentary film 'Take Back Your Power' ([www.](http://www.takebackyourpower.net)) takebackyourpower.net. This is a film about an investigation into the smart grid. Author Katie Singer wrote a book for me titled, "An Electronic Silent Spring" www.anelectronicsilentspring.com. Frank Clegg the former head of Microsoft Canada, has endorsed this book.

After arriving back home from San Diego the SDSU Administration sent me an epidemiological report. These are bogus statistical reports. All of these school cancer clusters deserved toxicology studies and reports. The professors in Nasatir Hall requested a toxicology study and were denied. I, to this day, request a toxicology study. Many of these professors wonder if and when they will be diagnosed with some form of cancer. A horrible thought for your future.

There is a cell tower on campus, directly outside of Nasatir Hall, room 131. I got on ([www.](http://www.antennasearch.com)) antennasearch.com and saw over 400 cell towers/antennas within a 4 mile radius in 2009. This particular cell tower I was looking for on campus was not listed, and it took me 4 months to find what this cell tower was and who was on it. The cell tower is called 'HPWREN - High Performance Wireless Research & Educational Network' a backbone node to the UCSD Supercomputer Center. It is MISSION CONTROL for SDG&E. It is connected via the Grid to almost every federal agency in the United States. HPWREN was a distance record holder in 2002 at 72 miles in all directions. From San Clemente Island, to almost the AZ border. Currently it has distances of 100 miles E-W and 200 miles N-S. HPWREN is connected to over 70 rural fire stations throughout Riverside and San Diego Counties. This is Broadband First Net for emergency responders. Broadband that will blanket the United

States. Rural areas are the target. I have attached a picture of the HPWREN cell tower taken in 2009. Please notice the dead tree foliage. Nasatir Hall, room 131 would be approximately 200' down on the left, in the picture.

Ms. Laurel Amtower was diagnosed with GBM brain cancer in November 2009 and passed away at the age of 44 on August 29, 2010. Laurel left behind a 12 year old daughter. There have been other deaths since the original 2009 articles. Dr. Paul Sargent passed away from cancer in 2013. Both located near this cell tower. Kenny Melton another young man who attended SDSU in this area, passed away from GBM brain cancer.

EHS symptoms should be taken seriously. Headaches, nausea, FATIGUE, endocrine problems, nose bleeds, etc... Rich suffered daily nose bleeds and panic attacks. Rich suffered from horrific headaches before diagnosis. Rich was having extreme underarm sweating (his endocrine system trying to cool his internal organs down) which mysteriously left after leaving SDSU. Rich was also have extreme memory problems. He was applying for law school in the CA area and would call me because he thought that even if he got excepted, he didn't know if he could make it through law school.

UCSD BREAST CANCER CLUSTER:

Between 2000-2006 there were 8 women diagnosed with aggressive forms of breast cancers. All of these women worked in one office in the Literature building on the UCSC campus. This cancer cluster was announced in 2009 and compared in the media with SDSU. Once again, an epidemiological report was released. In the Confidential Report that I have attached for you, Dr. Leeka Kheifets was put in charge of this investigation. Dr. Leeka Kheifets works for the 'Electrical Power Research Institute.' Dr. Khiefets has testified in Arizona that smart meter emissions are safe...NOT! On page 4 is the list of victims and types of tumors. On page 27 there is a thank you from Jim Turman from SDG&E for his testings of EMF's in the building.

The office in question was located up against the electrical equipment room and an old elevator in the Literature building. High levels of EMR dirty electricity was found. This is why smart meters are so dangerous to human health. All of these cancer clusters were significant in having the WHO (World Health Organization) reclassify anything wireless to a class 2b carcinogen in May of 2011. Also attached is the new 2016 Resolution written by faculty and staff located in the Literature building. The Literature building is now closed on campus. Unfortunately a young (34) year old gal was diagnose in 2016 with an aggressive form

of breast cancer. All preventable. In 2011 during the IARC (International Agency for Research on Cancer) the United States out of 29 participating countries, was the only country that held firm for the class 2b carcinogen. **All other participating countries opted for the CLASS 1 CARCINOGEN, THE SAME AS BENZENE OR ASBESTOS.** Lloyd's of London and RE Swiss (underwriters for insurance companies) has never or will never, insure the wireless industry. They know it is harmful. It is the cumulative effects or the more received the more cell or DNA damage that will occur.

LA QUINTA MIDDLE SCHOOL CANCER CLUSTER:

This cancer cluster was originally announced in 2004. Dr. Sam Milham (also in the TBYP film) tested and found very high levels of EMR dirty electricity throughout this school. The school district threatened Sam with litigation, so he backed off. In spring of 2015 another cancer cluster at the La Quinta Middle school was announced. There are now between 50-100 new cancer cases, since 2004. Dr. Sam Milham's prediction. All of these victims, many are now young adults fighting for their very lives. All preventable with some cheap filtering techniques.

KELLY ELEMENTARY CANCER CLUSTER - CARLSBAD:

This cancer cluster was announced in 2010. Dr. Raymond Neutra and Dr. Thomas Mack, both epidemiologists and work for the state of CA were in charge of this cancer cluster investigation. They were both involved in the SDSU brain cancer cluster investigation. Several kids at this school were diagnosed with brain tumors and leukemia's, which raised red-flags. There are huge high tension electrical power-lines that cross within 400' of the center of this school. Upon further research (I have the list if you like) there were **59 cell towers/219 antennas within a 4 mile radius of this school in 2013.** Nothing has been done and all preventable.

RIPCON ELEMENTARY IN CENTRAL VALLEY:

This cancer cluster was announced last fall (2017). Several teachers and kids are being diagnosed with different forms of cancer. There is a cell tower that was installed in front of this school in 2009. Right in front...meaning literally right at the entrance of this school. Again, all preventable.

I would like to remind you that we are living in very dangerous times. Corporations are now in control. With cell phones, comes the infrastructure. There is sufficient infrastructure for emergency services right now, without adding more. 5G DAS small cells are the nail in the coffin. The coffins for us all! Please, do rethink this deployment of dangerous technology! In last July-August issue of the NEXUS magazine there was an article titled, '5G, WHAT YOU MAY NOT KNOW, MAY KILL YOU.' Joel Moskowitz a friend of mine out of Berkeley, was interviewed for this story. This will not only effect you, but your loved ones. Please, do the right thing until the evidence is out. The newly released NTP Study shows significant harm from wireless radiation. Too many people are suffering now. Please stop this, before we are all effected.

At some point the power and money will no longer matter. It may be your own life at stake. Trust me their is no amount of money or power that will ever make me or my family

whole again. All I want is my son. Death would be a welcomed relief than living in this horrific time on earth.

Sincerely,

Virginia Farver
